

# Korg nanoKONTROL1

## Setup

This MIDI Remote script will only work if used with a scene similar to the factory settings of scene 1.

If your nanoKONTROL settings of scene 1 are modified, you need to configure a scene in the same way like the factory setting of scene 1. To achieve that, you should save your current nanoKONTROL settings in the Korg Kontrol Editor to a file on your computer. After that, you can reset the nanoKONTROL to factory settings, by turning on the power while holding down the [REC] button, [STOP] button and [SCENE] button. Then you can use the Korg Kontrol Editor to save scene 1, load your previous setup and then load the factory scene 1 to an unused scene slot.
